Bridge

New skills start from old ones

A reskilling guide that starts from what you already know, so the AI era feels like a next step, not a cliff.

The problem

Learning something new feels scary

Because we think we have to start from scratch.

A new skill looks like an empty box. So people put it off, or never start. This fear was here long before AI.

> “People who doubt they can do something tend to avoid it or give up.”
>
> Albert Bandura, psychologist (self-efficacy theory, paraphrased)

The issue today

AI moves fast. The fear got louder.

46%

say learning AI feels like taking on a second job

37%

feel overwhelmed by how fast they must adapt

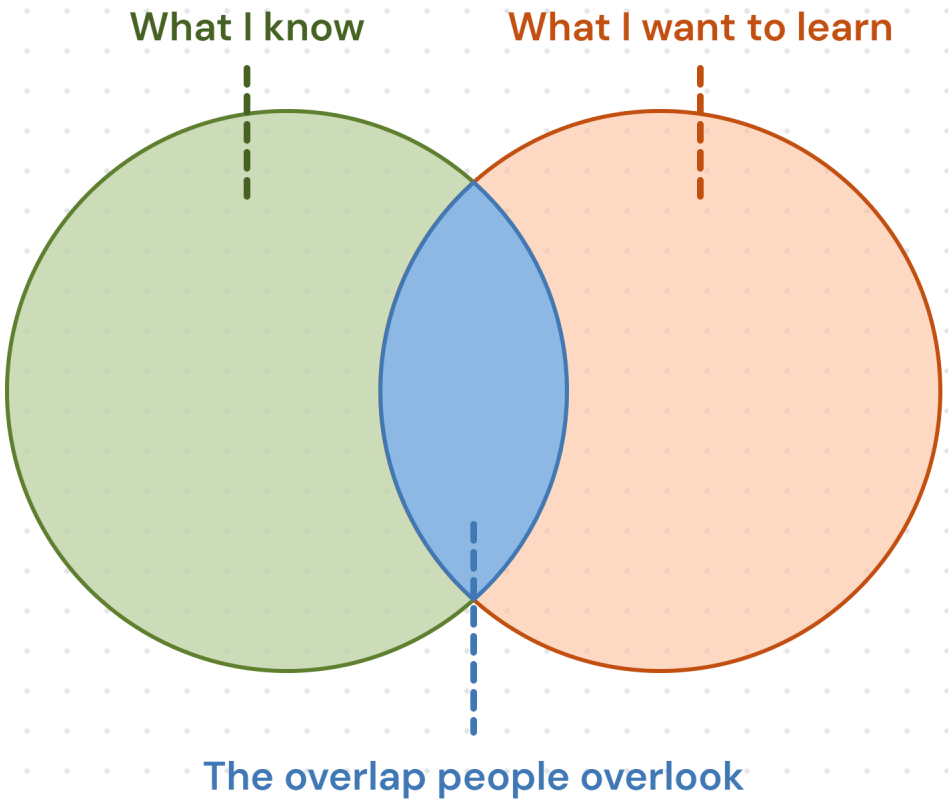

48%

only got training on the AI tools changing their jobs

LinkedIn survey, 19,000+ professionals, 2025 [verify against LinkedIn's release] · Randstad Workmonitor 2025, 27,062 workers in 35 markets.

The solution

Start with what you're familiar with

"You already know **20%** of it" sounds far more comforting than starting from scratch.

But how do you find that overlap, and get guidance from there?

20%: what Aina, our synthetic graphic designer, knows of UI design

The research

Feeling closer makes people start

#1

Believing “I can do this” was the **main driver of motivation to train**.

Machin & Fogarty, 2004

Been there

Having done something similar is the **strongest source** of that belief.

Bandura, self-efficacy theory

20 vs 40%

Adults who start furthest behind **train half as often**.

OECD, Future-ready adult learning, 2019

Ausubel (1968): “the most important single factor influencing learning is what the learner already knows.”

The product around the solution

Bridge: a reskilling platform

Bridge helps you... well... bridge the gap.

It reads your skills, matches each one to the EU's official ESCO skill list **by meaning**, then checks every topic of a role: green you know, yellow you partly know, grey is new.

Jobs & skills	Growth	Demand	Every role
ESCO · EU	**O*NET · US**	**Job ads**	**UN SDGs**

How it works

From who you are to where you can go

01

Tell us

Upload a CV or answer a short questionnaire.

02

Map your skills

Each skill is matched to ESCO, the EU's official list, by meaning.

03

See your matches

Five roles, a score you can open up, and the gap for each.

04

Grow

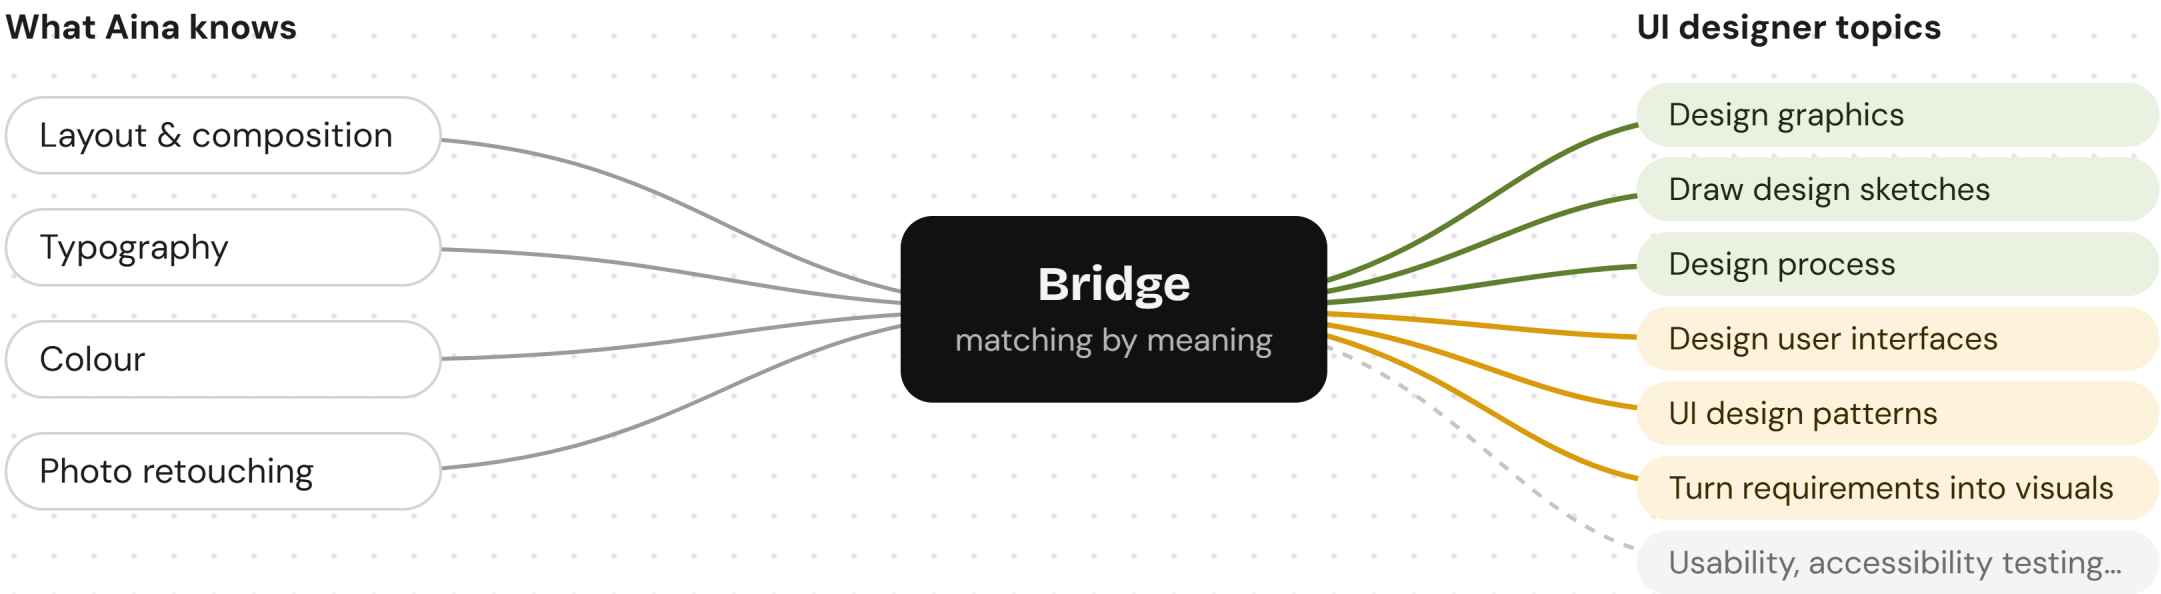

A path from familiar to new, with checked, mostly free courses.

How it works

Checking every single topic

Bridge compares each of your skills with every topic of a role by **meaning**, not keywords. Topics you partly know count as a head start, never as done.

Green already know · **Yellow** partly know · **Grey** new to learn · Demo profile Aina (synthetic) against ESCO “user interface designer”

The Bridge score

What you know leads. Demand follows.

You choose the stretch

“How far are you willing to stretch?” moves weight between familiar and high-demand roles. Demand only wins for people who choose to go bold.

Nothing hidden

Every score opens up into its parts. No generative AI decides the ranking: it’s maths over public data.

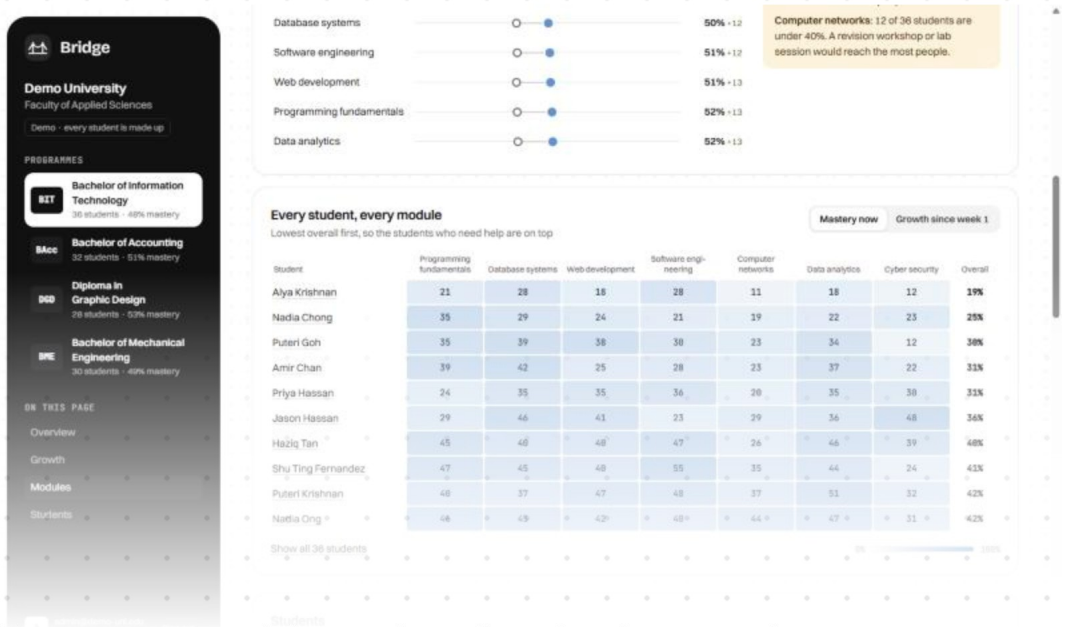

Weights at the middle comfort setting. Familiarity runs from 55% (“stay close”) to 35% (“go bold”).

Beyond the learner

Bridge shows the evidence. People decide.

Universities

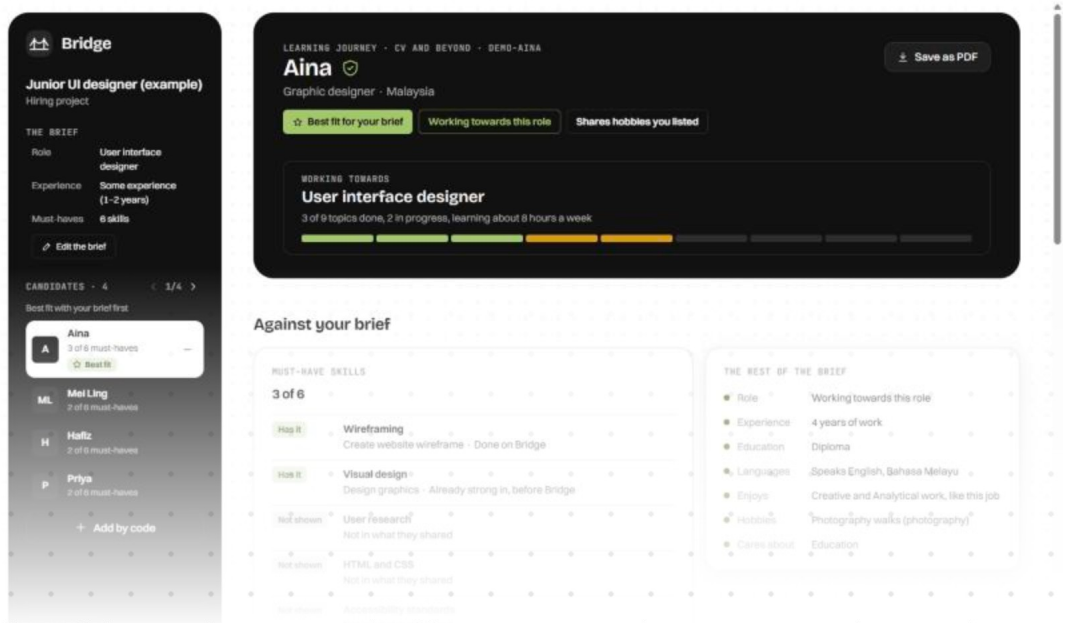

See which student is stuck, in which module.

Mastery per module, weakest first. Students opt in.

HR teams

See which candidate fits the brief, and why.

Candidates share a code. Name, age and country are ignored.

BUILT ON
