Replit Proof of Use

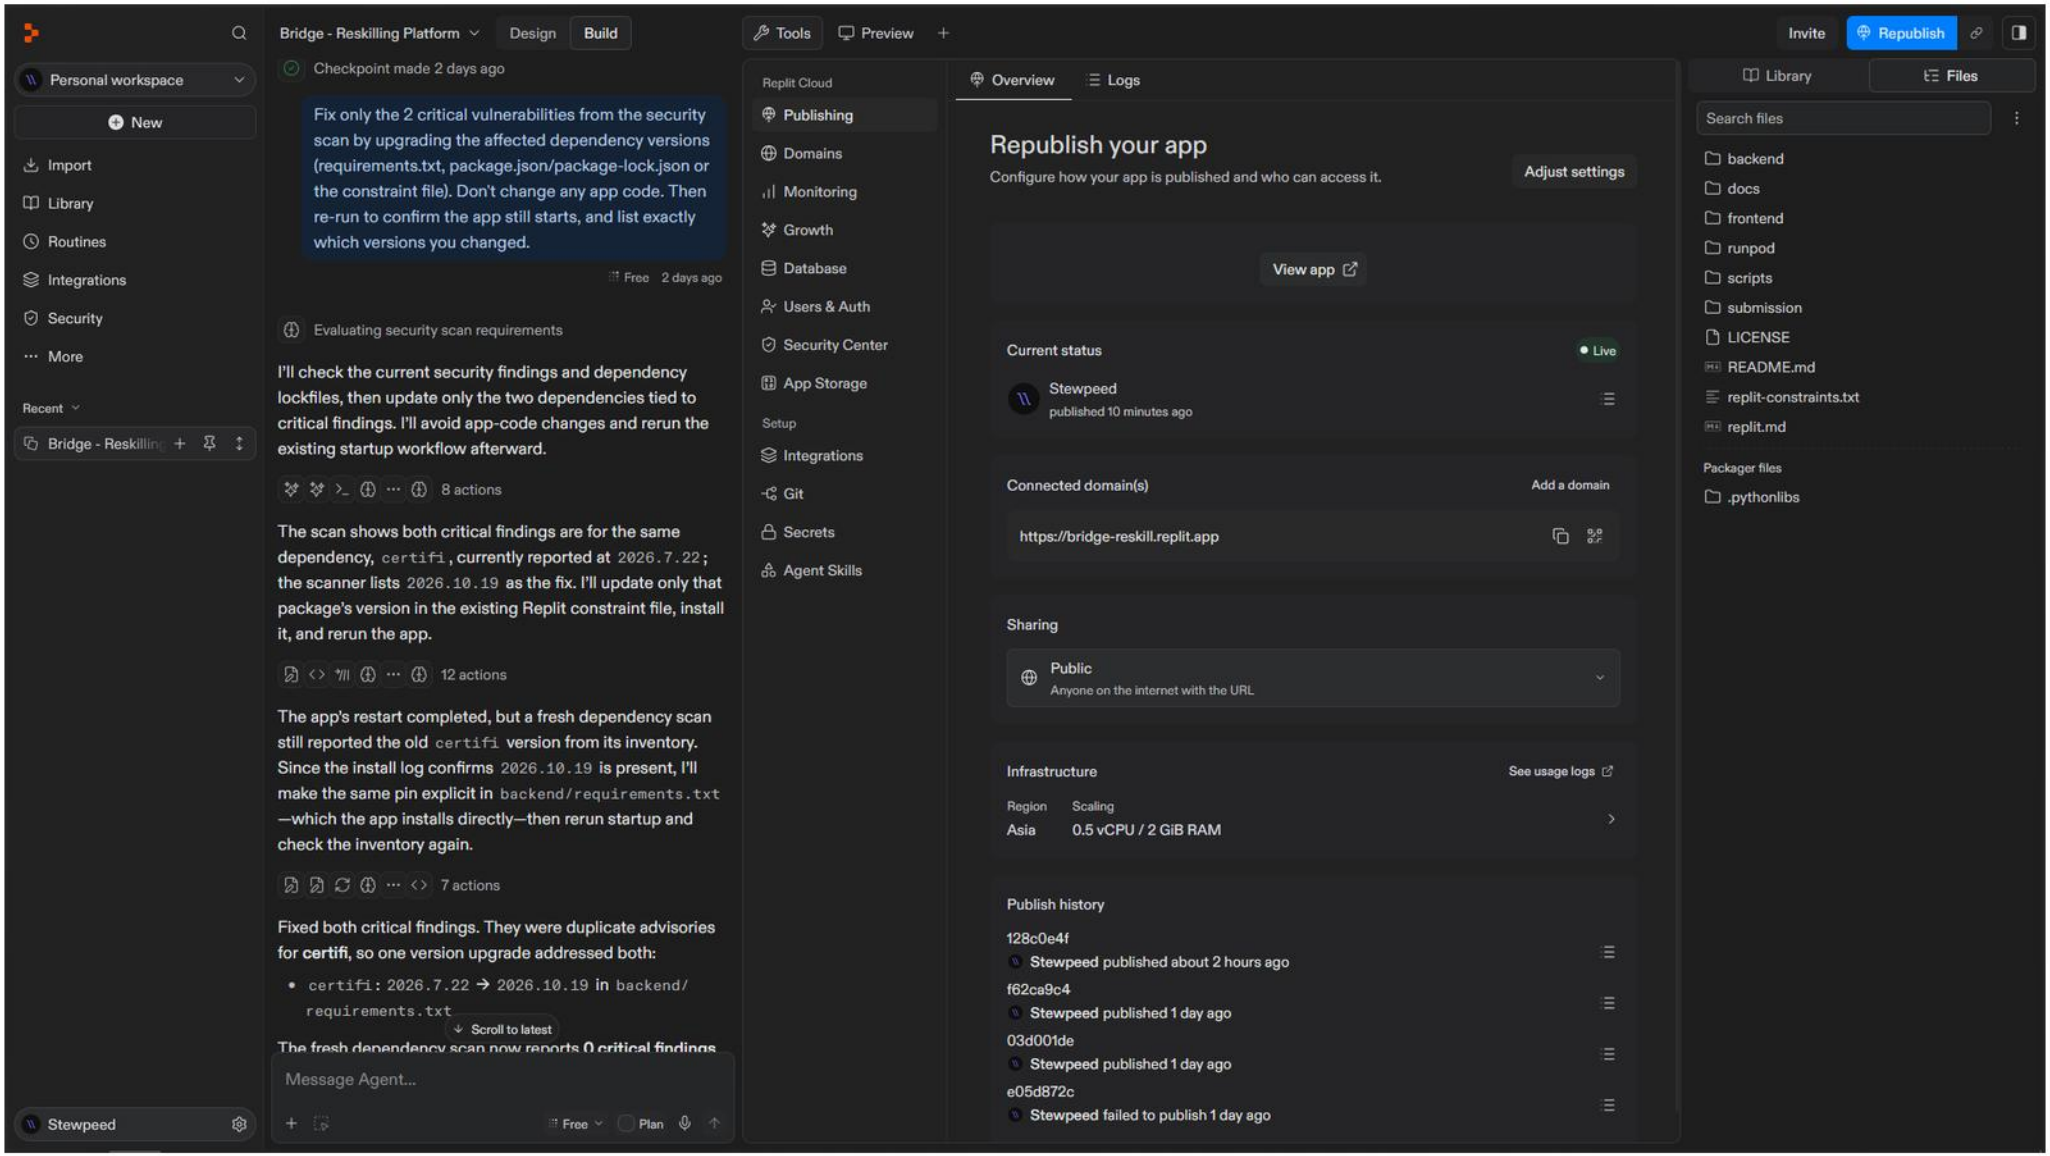

Bridge · SDC Hackathon 2026 · Domain 1

Live deployment	https://bridge-reskill.replit.app (status: Live, public)
Replit project	https://replit.com/@stewpeed-dev/Bridge-Reskilling-Platform
Deployment type	Reserved VM, 0.5 vCPU / 2 GiB RAM, region Asia
Hosting so far	33.55 compute hours (usage page, Oct 22 - Nov 21 period)
Replit AI	Replit Agent used while building ($0.36); Replit AI Integrations configured, not used
Account	Team's own Replit account (Stewpeed, visible on every page)

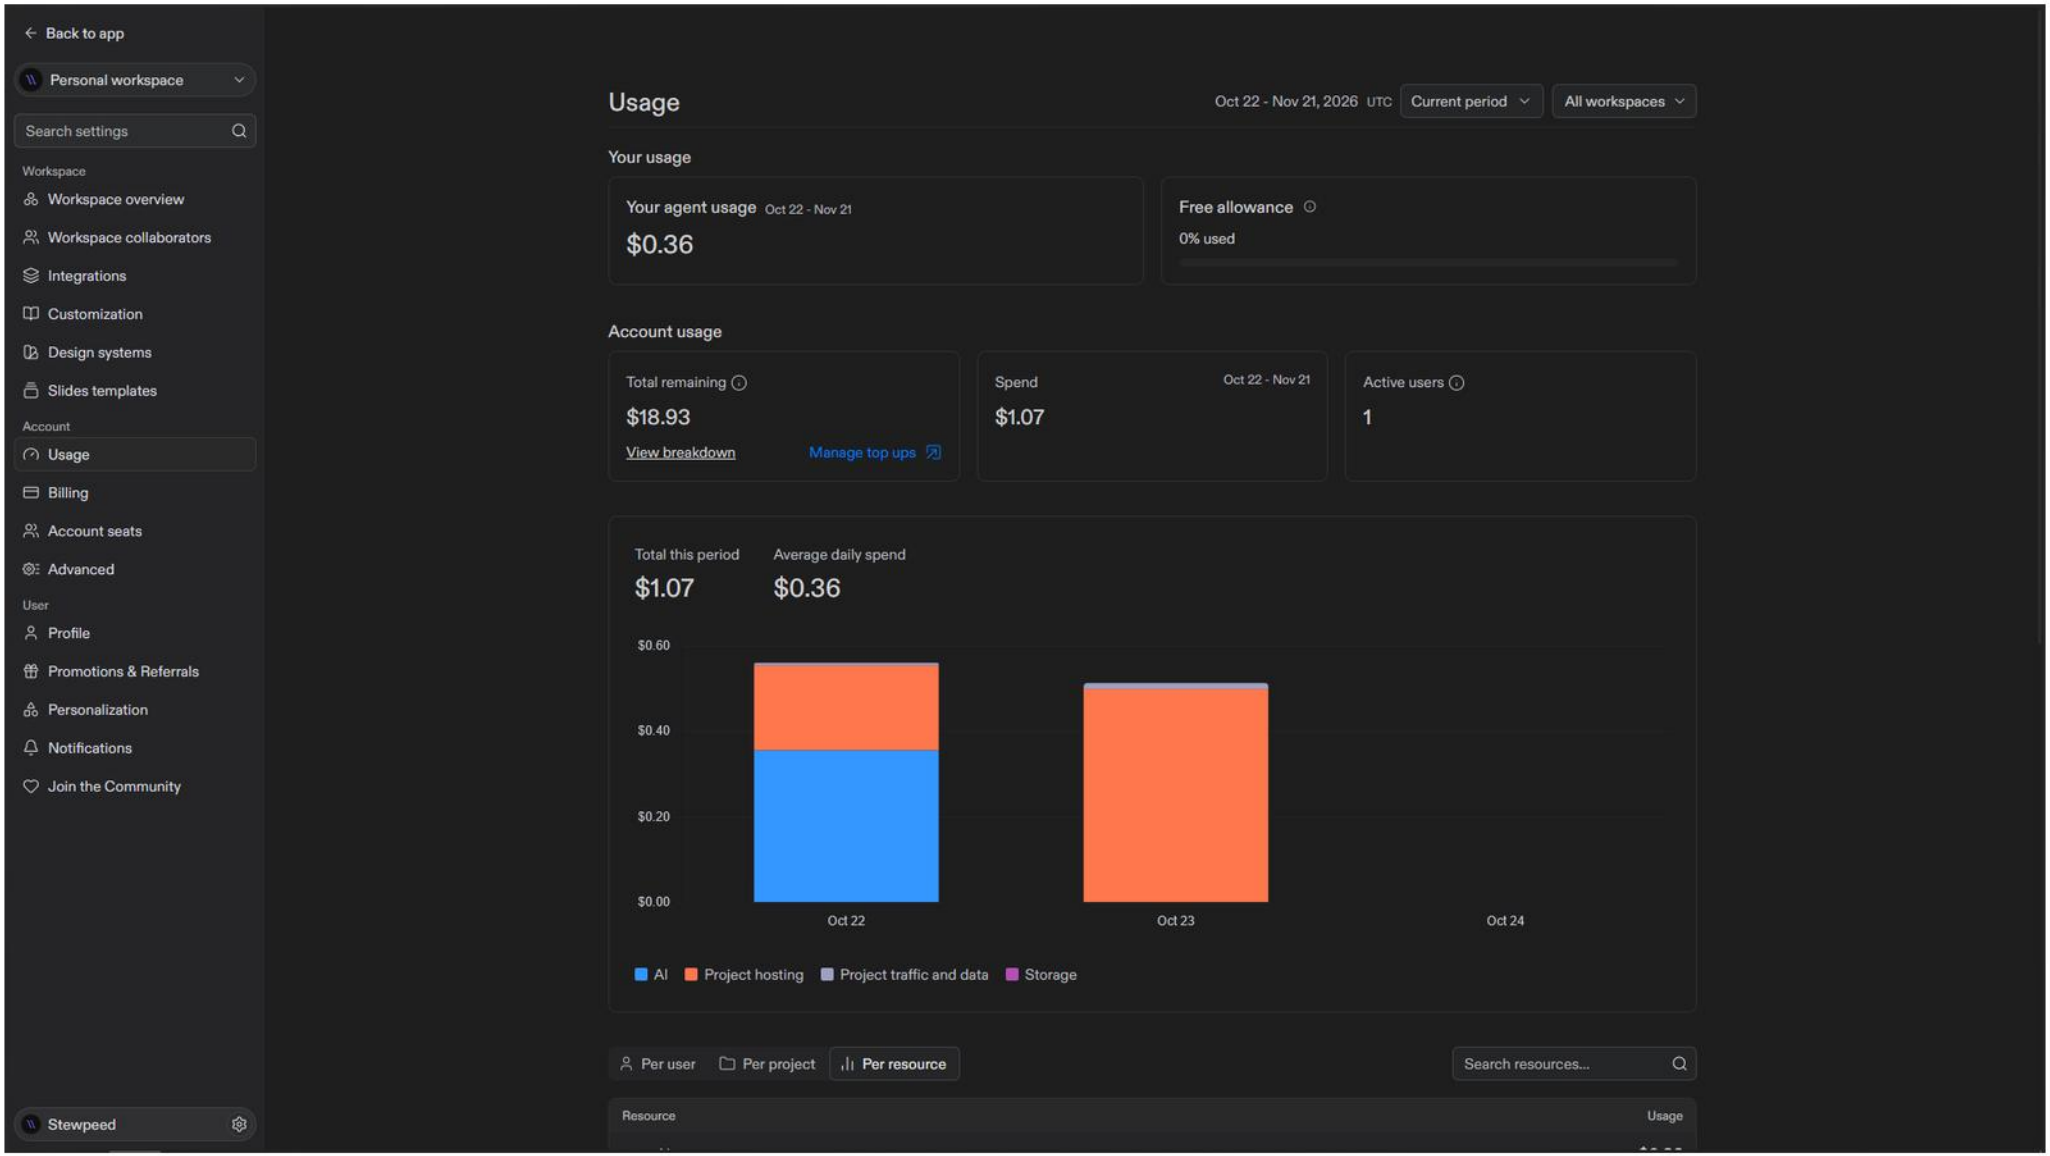

How we use Replit

Replit hosts the whole app: one FastAPI server serves the API and the built React app (.replit runs scripts/start.sh). Every judge-facing link in the README points at this deployment, and the logs on page 5 show real requests to the matching, pathway and course endpoints.

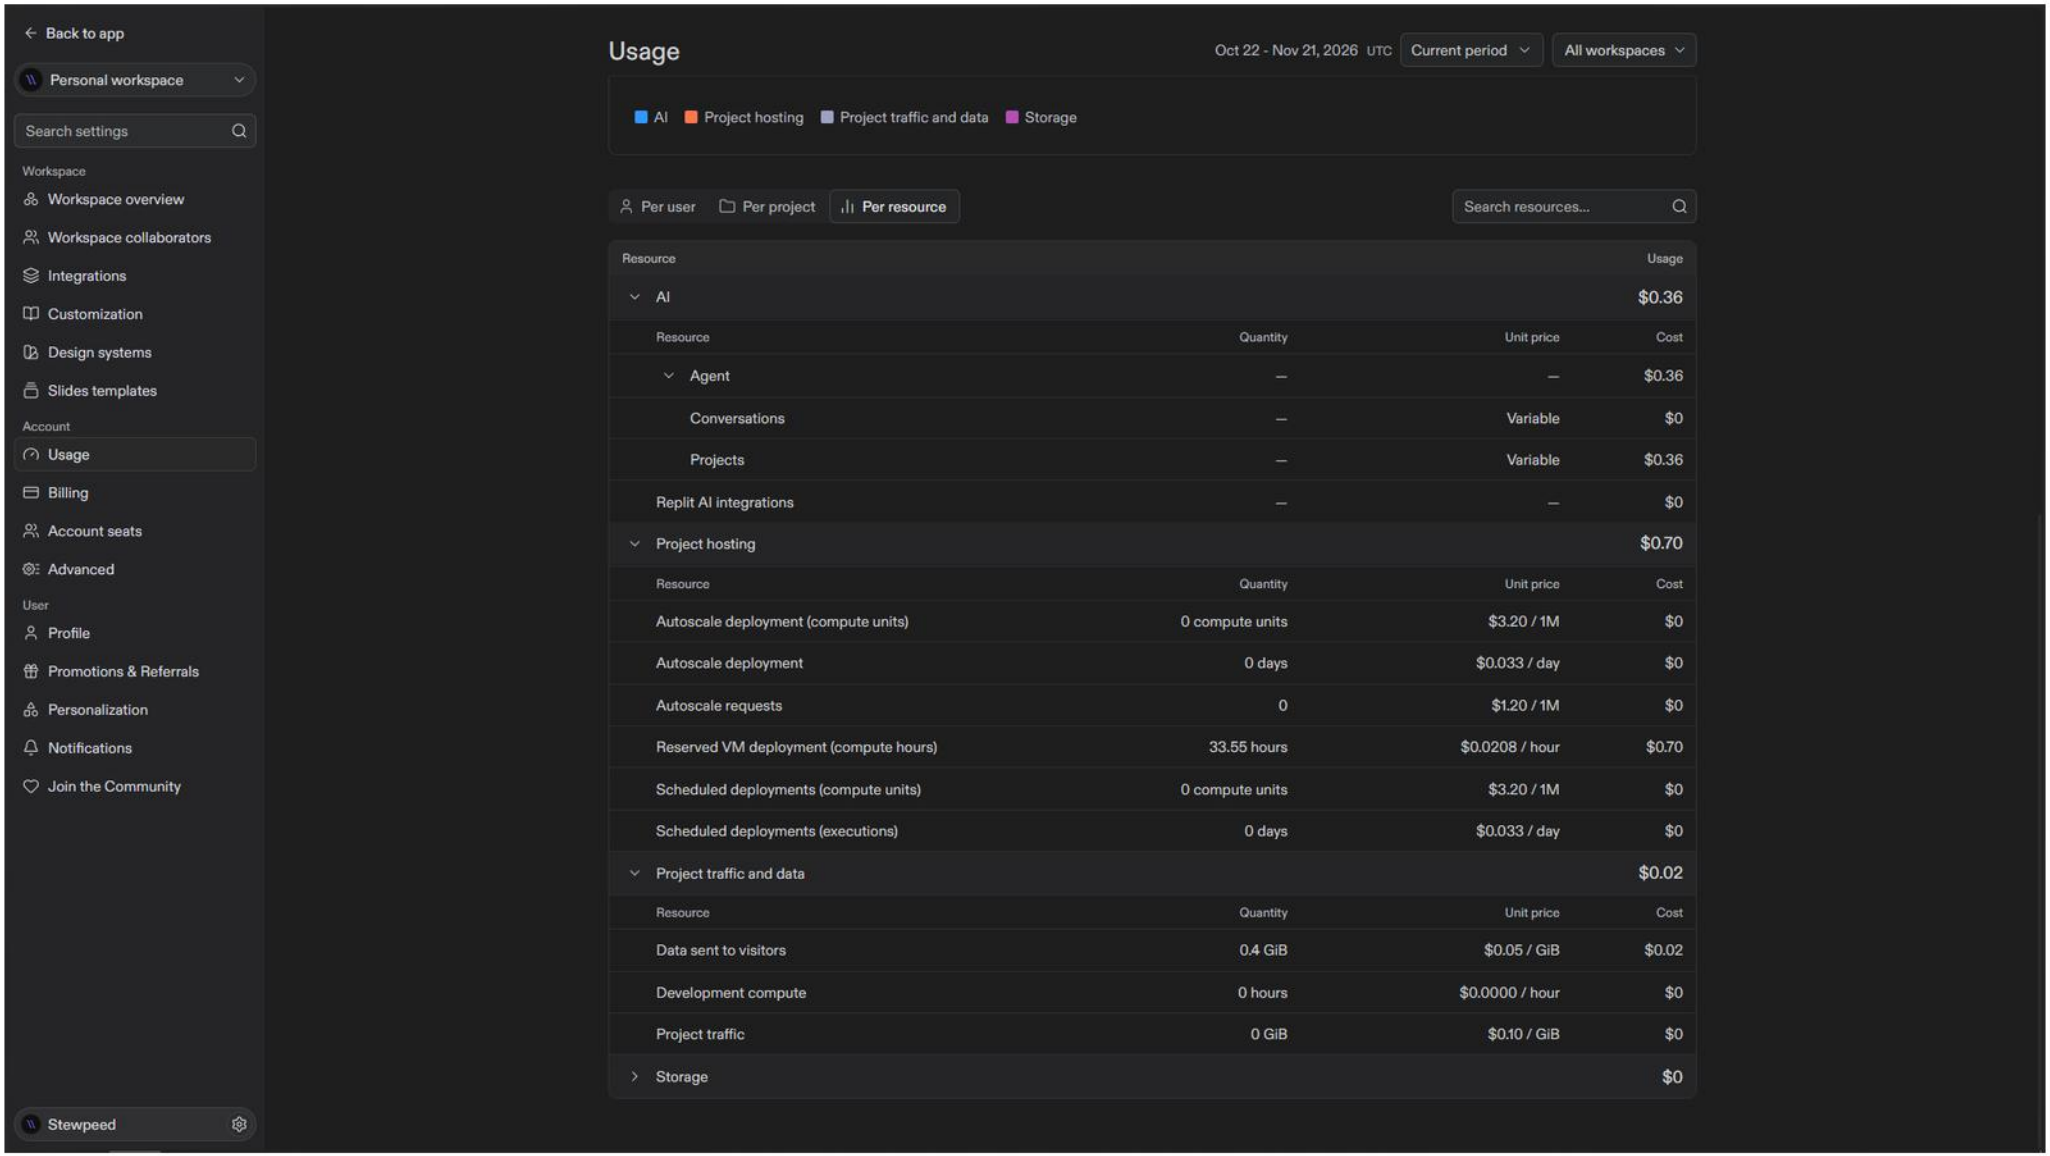

Publishing overview: Live, bridge-reskill.replit.app, publish history

Account usage: spend this period, split by AI and hosting

Usage per resource: 33.55 h Reserved VM deployment, Agent AI

Deployment logs: real requests to /api/match, /pathway, /api/courses
