RunPod Proof of Use

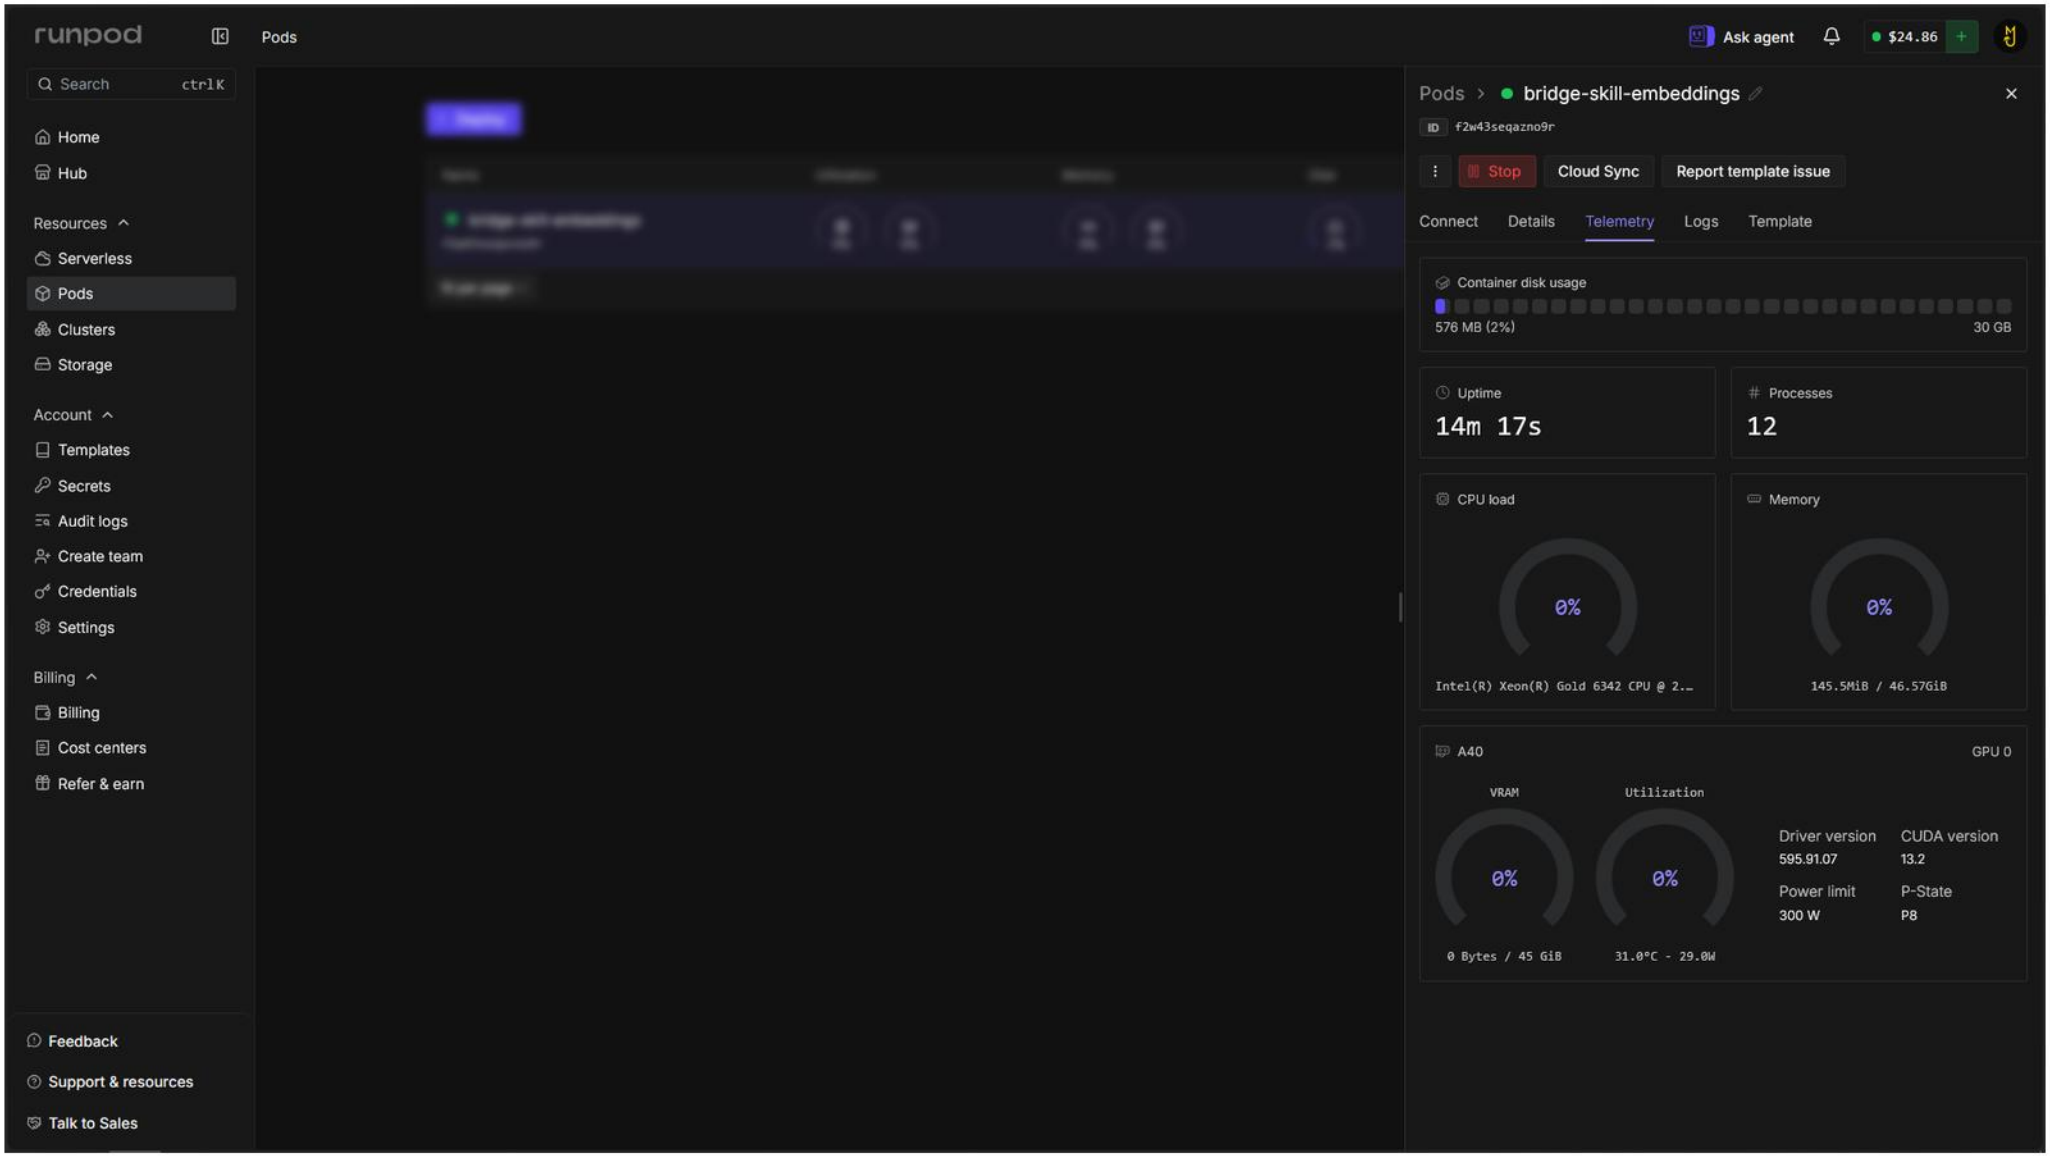

Bridge · SDC Hackathon 2026 · Domain 1

Pod name	bridge-skill-embeddings
Pod ID	f2w43seqazno9r
GPU type	1x NVIDIA A40 (48 GB VRAM) · reported by the job: NVIDIA A40
Runtime	Pod uptime 14m 17s at the time of the telemetry screenshot (page 2)
Template	RunPod PyTorch 2.8.0 (CUDA 12.8)
What ran on the GPU	runpod/embed_skills.py: embeds ESCO skills and job titles with BAAI/bge-small-en-v1.5 (384 dimensio
Job result	3943 texts embedded on CUDA in 6.23 s (2026-10-21T15:40:11Z)
Output	backend/data/embeddings/embeddings.npy + embeddings_meta.json (in this repo)
Account	Team's own RunPod account (username visible on page 5)

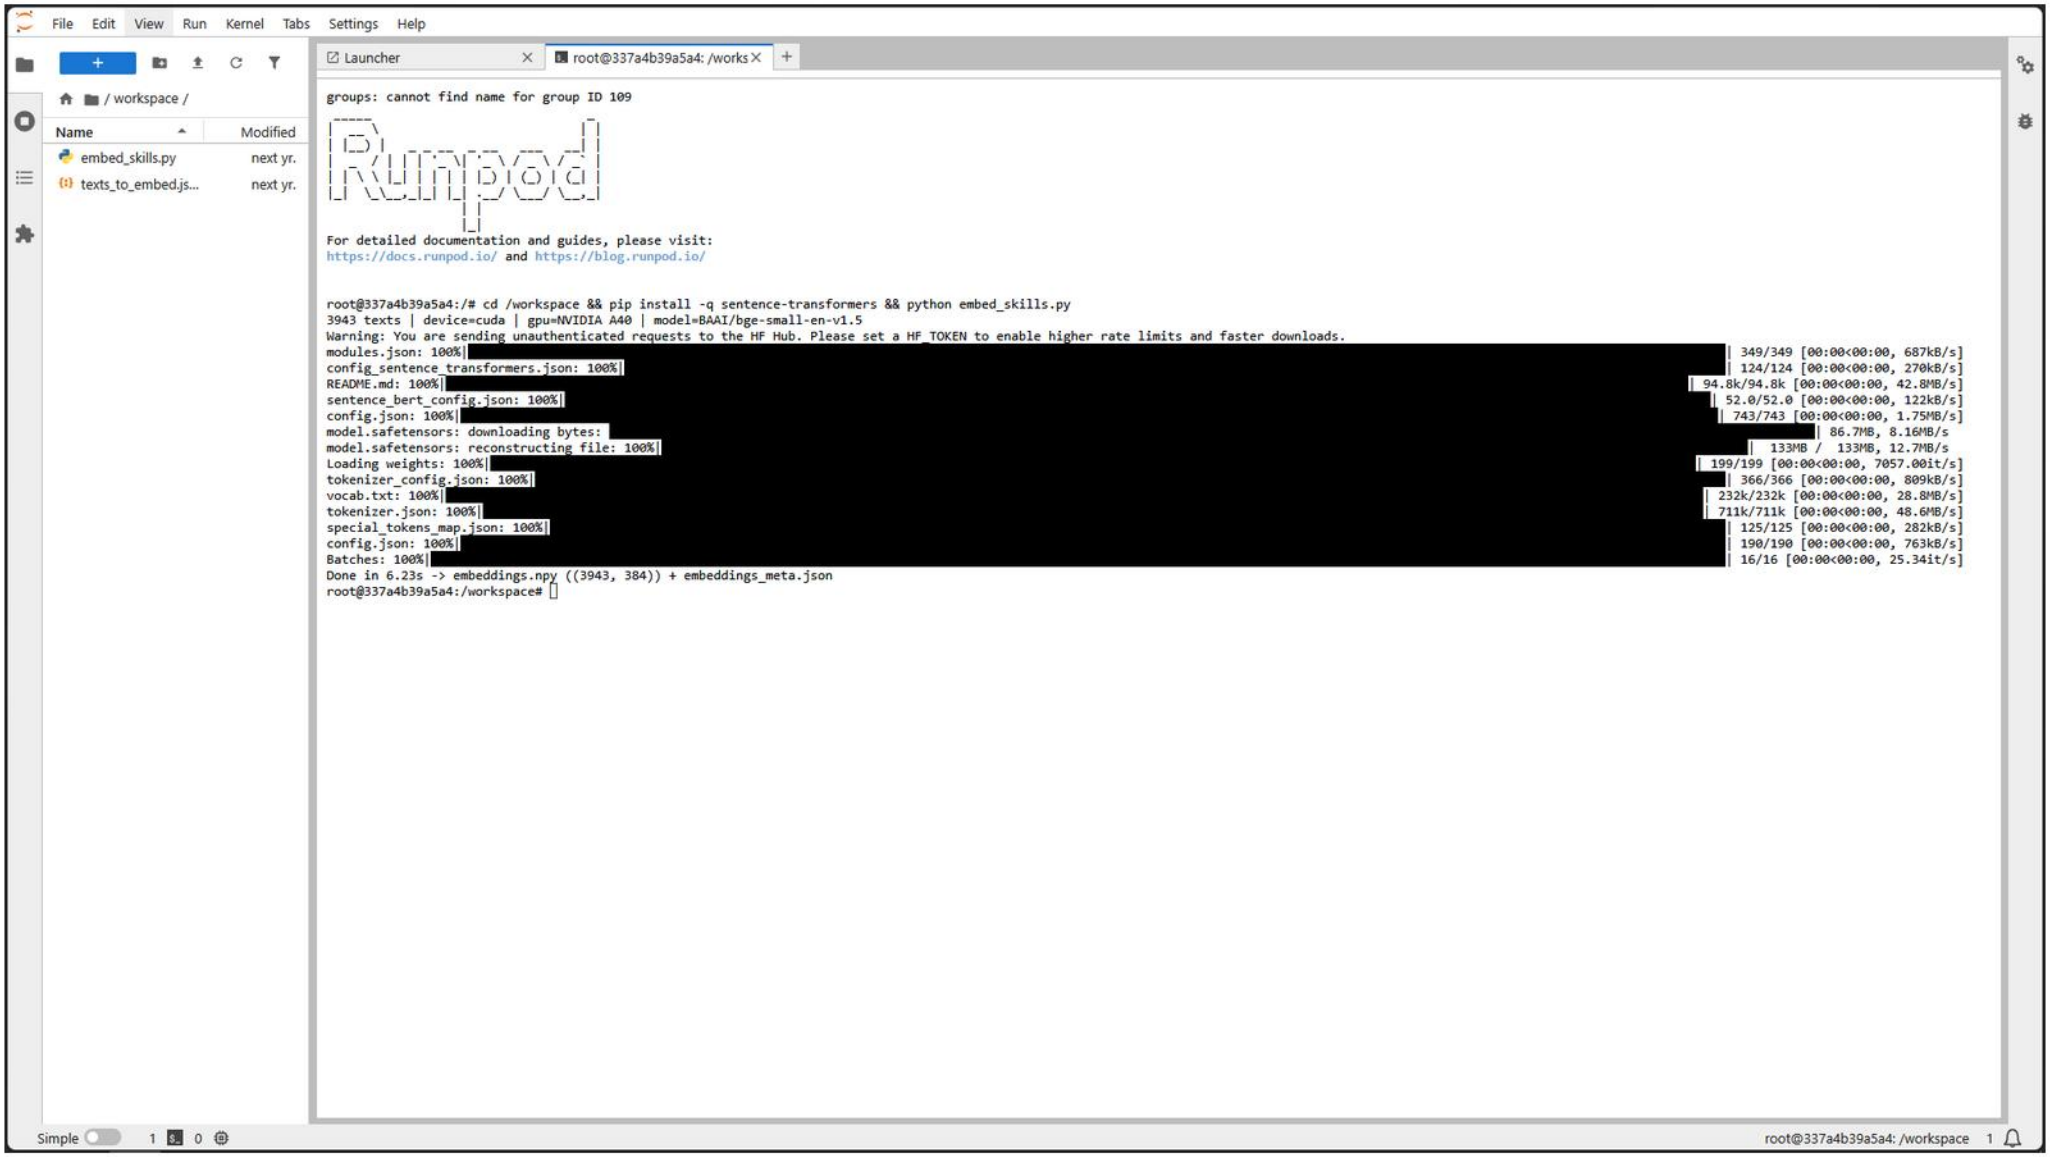

Why we used a GPU

Bridge tells people which new skill they already partly know. To do that it must recognise that differently worded skills mean similar things (e.g. "colour correction" ~ "colour grading"). Plain word matching misses most of these, so we turn every ESCO skill and job title into an embedding: a list of 384 numbers that captures meaning, computed by a neural network. Embedding the full catalogue is GPU work, so it ran once as a batch job on RunPod. The results are stored in the repo; the live app only embeds the user's few phrases on a CPU at request time.

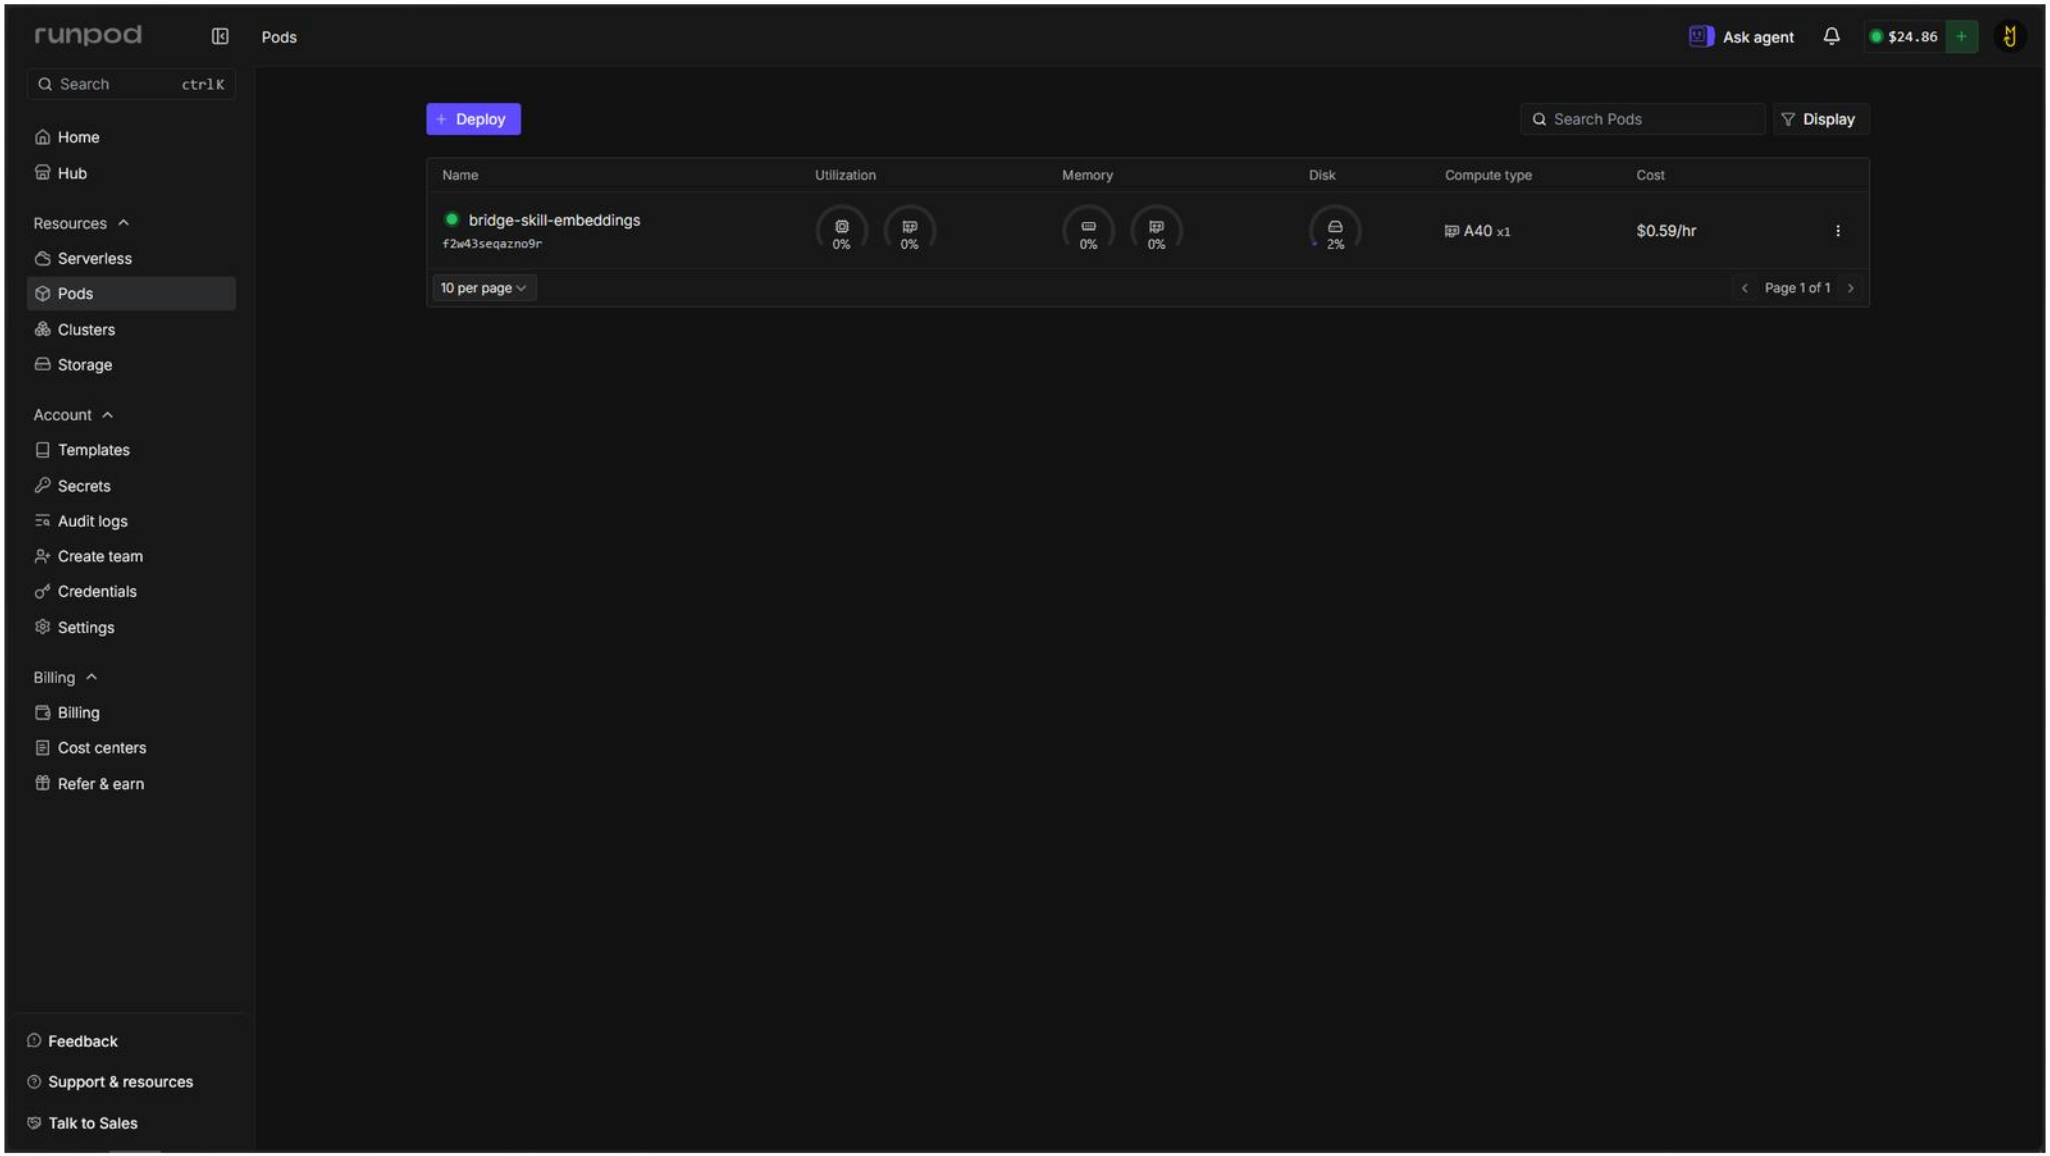

Pod telemetry: name, Pod ID, A40 GPU, uptime 14m 17s

Embedding job running on the pod (Jupyter terminal)

Pods list: bridge-skill-embeddings, ID f2w43seqazno9r, A40 x1, $0.59/hr
